Required:	Pollock, *The Essentials of Political Analysis*, 5th edition Pollock, *A Stata Companion to Political Analysis*, 3rd edition

Purpose.
In this course, you will learn intermediate and advanced methods of measurement, research design, and data analysis. In this course you will become an advanced user of Stata, a powerful data management and data analysis package. Your goals: become a sophisticated consumer of political science research; develop the skills you need to contribute to the scholarly literature; use your research and data analysis skills to ***produce a research paper of publishable quality on a topic of interest to you***.

Requirements.
I. (60 percent of course grade.) The course has three parts: Concepts and measurement, descriptive statistics and bivariate data analysis, and multivariate methods. Accordingly, you will develop your research paper in ***three cumulatively written parts***. (1) Research question / literature review / hypotheses; (2) Part 1 (revised) plus: Description of variables / bivariate analyses; (3) Parts (1) and (2) plus: Controlled comparisons / multiple regression / logistic regression / conclusions and implications. (For a more complete breakdown, see the *Stata Companion*, pp. 194-199.) Paper due dates: ***September 21, October 26, and November30***. Overall paper length: ***6,000-8,500 words*** (approximately 25-35 double-spaced pages).

II. (10 percent). You will ***present your research to the class***, using Power Point (or an open source alternative), on November 30.

III. (10 percent). You will ***attend every class***. You will ***contribute to class discussion***.

IV. (20 percent). You will complete and ***turn in weekly assignments***.
