ENY4004C: General Entomology
“Know the smaller majority”

Catalog description:
ENY 4004C COS-BIOL4(2,6). General Entomology: PR: earned a "C" (2.0) or better in both BSC 2010C and BSC 2011C, or C.I. Biology of insects: identification, taxonomy, physiology, behavior, and ecology. Occasional. M&S fee $15.00

Class Meeting Time: Monday and Wednesday 9:00am – 9:50am, BIO 0105.
Lab Meeting Time: Monday and Wednesday 10:00am – 12:50am, BIO 0105.

Instructor:
Dr. Barbara Sharanowski
Biology 441/442, phone: 823-0675
barb.sharanowski@ucf.edu
Office Hours: Monday 1:30-3:30pm, Wednesday 1:30-3:30pm, and by appointment

Teaching Assistant:
Amber Bass
Biology 442
amber.ih.bass@gmail.com
Office Hours: Monday 2:00-3:00pm, Tuesday 10:30-11:30am, and by appointment.

Scope: Insects affect human lives in significant ways every day, from pollinating our crops to transmitting deadly diseases. This course provides an excellent background in general entomology, including the classification, anatomy, physiology, behavior, ecology, and evolution of insects. There is a large focus on how insects impact human life and ecological interactions between insects and other organisms across diverse ecosystems. The lab focuses on identifying common insects across all orders as well as developing skills in insect collecting, preservation, curation, and imaging. This course is useful for anyone considering a career in entomology, museum based careers, and for any student interested in taxonomy, biodiversity, systematics, evolution, insect morphology, and applied aspects of insect identification.

Course Philosophy
Students’ Learning Responsibilities
Students are expected to practice personal and academic integrity and to take responsibility for one’s own personal and academic commitments. Within the context of this class, regular attendance is critical to facilitate effective learning. Participation in class is expected and heavily encouraged. Students should respect others and contribute to cooperative learning by promoting a respectful atmosphere and striving to learn from differences in people, ideas, and opinions. Students are expected to be prepared for class and submit assignments on time. Students are highly encouraged to ask for help under any circumstances, but particularly if having difficulty with material or learning.

Instructor’s Notes:
The instructor reserves the right to make changes to the syllabus and the management of the class at any time during the semester. These changes will be announced in lecture. If the student is in disagreement with anything contained within the syllabus (e.g. course material, structure, grading policy, etc), it is recommended that the student withdraw from the course prior to the university posted
deadline. The instructor also reserved the right to adjust grades up or down upon a request for a re-assessment by the student.

**Student Learning Outcomes:**
After completion of the course, students should be able to:

**(Cognitive)**
- Differentiate an insect from other life forms and know the basic anatomy of an insect.
- Understand the classification of insects, importance of taxonomy to other disciplines, and appreciate the vast diversity of insect life and form and function
- Recognize insect morphological characteristics, including external and internal anatomy
- Describe basic insect physiology, including growth and development of different types of insects
- Recognize, evaluate, and articulate the advantages and disadvantages of different management strategies in pest control of insects.

**(Behavioral)**
- Collect insects for study using a range of aquatic, aerial and terrestrial field collecting techniques
- Identify all orders and common families of insects
- Preserve specimens for museum study and appreciate the importance of museums for teaching, research, and outreach
- Research a topic of interest and be able to communicate scientific knowledge in a meaningful way to a broad audience

**(Affective)**
- Understand the value and importance of insects and understand the ecological roles insects have in different ecosystems
- Appreciate the global impact of insects on human existence with respect to disease transmission and agricultural production

**Classroom Conduct:** By enrolling at UCF, all students have agreed to abide by the Golden Rule. Please become familiar with this document at: [http://www.goldenrule.sdes.ucf.edu/](http://www.goldenrule.sdes.ucf.edu/). Please also use common courtesy in class by arriving and departing on time, refraining from sleeping/talking during class, and **turning off** cell phones, music devices, etc. Students are responsible for all announcements made or assignments given during class. Students who fail to abide by the above may be asked to leave the class.

**Academic Integrity:**
Plagiarism or any other form of cheating in examinations, term tests or academic work is subject to serious academic penalty. Cheating in examinations or tests may take the form of copying from another student or bringing unauthorized materials into the exam room, including cell phones or computational devices. Exam cheating can also include exam impersonation. A student found guilty of contributing to cheating in examinations or assignments is also subject to serious academic penalty. Plagiarism involves an attempt to pass off the work and ideas of others as one’s own and is considered cheating. Citing all sources for ideas, images, or otherwise is essential. Students must cite the source of images used in their presentations, but are encouraged to take their own photographs. Students should acquaint themselves with the University’s policy on plagiarism, cheating, exam impersonation, and duplicate submission (see [http://www.goldenrule.sdes.ucf.edu/](http://www.goldenrule.sdes.ucf.edu/)). Electronic detection tools may be used to screen assignments in cases of suspected plagiarism.

**Disability Access Statement:**
The University of Central Florida is committed to providing reasonable accommodations for all persons with disabilities. This syllabus is available in alternate formats upon request. Students with disabilities who need accommodations in this course must contact the professor at the beginning of the
semester to discuss needed accommodations. Students who need accommodations must be registered with Student Disability Services, Student Resource Center Room 132, phone (407) 823-2371, TTY/TDD only phone (407) 823-2116, before requesting accommodations from the professor.

**Inquiries to the Instructor:**
Students are encouraged to discuss issues pertaining to assignments with the instructor well in advance of deadlines. While every effort will be made to return student inquiries via email as soon as possible, students should expect a minimum of 24 hours to receive a response. Students are encouraged to drop by the instructor’s office for assistance (Room BIO 441), particularly during office hours.

**Instructional Methods:**
This course combines traditional lecture and interactive laboratories to achieve course and learning objectives. Traditional lectures are intended to introduce the major morphological features for different insect lineages and to explain the current understanding of insect evolution in a phylogenetic framework. During lab sessions students will sort, curate and identify their own collected material as well as insects provided by the instructor. Field days are scheduled but may be cancelled or delayed due to weather. Students should come prepared to hike for field days with proper shoes, a hat, sunscreen, long pants to prevent scrapes, water and snacks for sustenance, and insect repellent if needed. Items can be stored in the lab if there is available space upon approval of the instructor or T.A.

**Late Assignments:**
Late assignments will be deducted 10% of the final grade for that assignment for every 24-hour period it is late. Assignments must be submitted at class time on the date and time due. Late is considered past the set time noted in the due date. Thus, if an assignment is due at 8:30am and is handed in at 1pm on the same day, it is still considered 1 day late. Late assignments should be handed in to the instructor in class.

**Missed Assignments:**
To pass the course, all items for which a mark is allocated must be completed and submitted. Additionally, the lab component of the course must be passed to successfully complete the course. Unexcused missed assignments will result in a failure of the class. Where assignments are missed and excused through written notification such as a doctor’s certification of illness, evidence of death in the family, or other circumstances that are beyond the control of the student, the student may be given the following options:
1) Complete the assignment and receive the late assignment penalty as described above,
2) Establish a new due date with the instructor and complete the assignment without penalty when handed in by the new due date, or
3) The final grade will be determined by increasing the value of the final class or lab exam (for missed lab assignments or missed class midterm) by the amount that would have been allocated to the missed assignment. **Option three is only viable under extreme circumstances.**

**Missed Exams:**
See above, however all students must write the both the lab and class final exams to pass the course. If the final exam has been missed for a valid, documented reason such as illness, or death in the family, another exam date will be set at the discretion of the instructor.

**Course materials:**
**Recommended, but not mandatory.**

Assessment and Grades:

Grade Evaluation

- Syllabus Exam 2.5%
- Lab Midterm 15.0%
- Class Midterm 15.0%
- Class Presentation 10.0%
- Class Final 25.0%
- Insect Collection 12.5%
- Lab Final 20.0%

Grading Scheme: A = 100-90; B = 89-80; C=79-70; D=69-60; E/F (fail) < 60

Description of Examinations:

Syllabus Exam
This short exam tests your knowledge of the information obtained in this syllabus, rules mentioned in class, as well as descriptions of assignments handed out in class. Basic class rules and assignments are the focus.

Class Midterm and Final
The midterm and final exam will consist of multiple-choice, short-answer and essay questions about specific topics covered in lectures and class discussions. Questions will assess student’s mastery of the content and ability to communicate and defend viewpoints on specific issues related to insects and their impact on the environment and human life. Some content is taught in both lecture and lab and will require students to integrate the knowledge learned in both sections.

Pretest
A Pretest will be given out on the first day to test student’s knowledge and background information upon entering the class. There are no grades associated with this test, it is purely to assist the instructor.

Lab Exams
The lab exams will assess student’s ability to identify insects by knowing key morphological characteristics that define orders and common families of insects learned within the laboratory. Students will be expected to know specific identifying characteristics of organisms to allow them to identify multiple families of insects across all orders. Students will also be expected to know some basic information about the biology of species covered in the lab sessions (e.g. feeding guild; resident ecosystem, importance for disease, agriculture, or applied sciences etc). Questions on the exams will also come from laboratory content related to curation, identification, museum management, biodiversity, collecting, imaging, and outreach.

Description of Assignments

Oral Presentation (10% of final grade):
The purpose of this assignment is to ensure students can research an entomological topic of interest and communicate about entomological science to a broad audience. Students will be choose an insect to research but should obtain approval of the instructor. Students can also choose a mythbuster assignment (see handout). Students will present their topic to the class (5 minute oral presentation, followed by two minutes of questions), utilizing images obtained from the lab and researched sources. Power point is strongly recommended as a delivery format. See assignment handout and grading rubric for more details.
**Insect Collection (12.5% of final grade)**

The purpose of the collection is to teach students how to collect, sort, and identify insects – with a focus on adult insects. Students will also learn how to properly curate and preserve insect specimens, including proper mounting, labeling, and storage. Students must hand in 25 curated and identified specimens. See assignment handout and grading rubric for more details.

**Assignment and Exam Due Dates**
- Monday, August 21, 2017: Pretest
- Wednesday August 23, 2017: Mandatory Syllabus Test
- Monday October 2, 2017: Class Midterm
- Wednesday October 11, 2017: Lab Midterm
- Monday, November 1, 2017: Class Presentations (for a scary Halloween!)
- Wednesday, November 22, 2017: Insect Collection Due (before Thanksgiving!)
- Wednesday, November 29, 2017: Lab Final

**Course Schedule:**
