

Exercise 12 – Modeling Decision Making Due April 10, 2024

During the semester, we discussed several aspects of the decision-process used to build models. This process includes some explicit elements and some more 'creative' ones.

Working in groups of 2-3, discuss and write down as many of these elements as you can, and then:

1. Build a generic flowchart detailing the different elements and how they connect, adding loops and forks where necessary.
2. Share with the class and discuss the differences.
3. As a class, we will come up with a consensus flowchart.
4. In a document, present your group flowchart, the consensus flowchart, and explain the discrepancies.

NOTE: Please submit your results as a single document – pdf preferred – via email to Michelle (Michelle.Bardales@ucf.edu).
