Course Description

BSC 2011C (Biology II) is the second of a two-semester general biology sequence and a continuation of BSC 2010C (Biology I). Biology II serves as a prerequisite for other, upper-level biology courses and/or as an admission requirement for many post-graduate programs.

The course discusses evolution, phylogeny, biodiversity, and ecology of prokaryotes and eukaryotic plants and animals. The course places an emphasis on problem-solving, analysis, synthesis of information, and applying data effectively as it relates to the course content and biological concepts discussed. To achieve this level of learning, in addition to lecture presentations, BSC2011C makes use of online post-lecture quizzes to help students learn content and to prepare for in-class active learning assignments that all focus on developing and testing problem solving and information synthesis skills.

Course Materials and Resources

Required Materials/Resources

- The required textbook for this course [OpenStax Biology 2e](https://openstax.org/books/biology-2e) is available for **free** online:

Since this textbook is an Open Educational Resource (OER), specific modules of the text, relevant to this course, have also been integrated into Webcourses Pages and Modules. **Students are highly encouraged to utilize this curated version of the online text in order to focus on the necessary content in an efficient manner.**

Student Learning Outcomes

- Given biological examples, students will be able to correctly differentiate how they relate to evolutionary concepts and theories.
- Given phylogenetic relationships, students will be able to correctly interpret the level of organisms' relatedness.
- Given organismal features, students will be able to correctly reconstruct phylogenetic classifications.
- Given real biological observations, students will be able to correctly implement the concepts of evolution and biodiversity.
- Given the descriptive characteristics of plants, students will be able to correctly distinguish between seedless plants and seed plants, including gymnosperms and angiosperms.
- Given the descriptive characteristics of animals, students will be able to correctly identify distinguishing features of animals in general as well as key features of major animal divisions from simple invertebrates through advanced vertebrates.
- Given the characteristics of a given ecosystem, students will be able to make connections between biotic and abiotic factors and understand how organisms are linked to their environment as well as each other through trophic level interactions.

Campus Safety Statement

Emergencies on campus are rare, but if one should arise in our class, everyone needs to work together. Students should be aware of the surroundings and familiar with some basic safety and security concepts.

- In case of an emergency, dial 911 for assistance.

- Students should know the evacuation routes from each of their classrooms and have a plan for finding safety in case of an emergency.
- If there is a medical emergency during class, we may need to access a first aid kit or AED (Automated External Defibrillator). To learn where those items are located in this building, see <http://www.ehs.ucf.edu/workplacesafety.html> (click on link from menu on left).
- To stay informed about emergency situations, sign up to receive UCF text alerts by going to my.ucf.edu and logging in. Click on "Student Self Service" located on the left side of the screen in the tool bar, scroll down to the blue "Personal Information" heading on your Student Center screen, click on "UCF Alert," fill out the information, including your e-mail address, cell phone number, and cell phone provider, click "Apply" to save the changes, and then click "OK."
